Diagramming an argument can be done in the case where there are several premises that address each of the goals of the argument. Another way to diagram an argument is to use a goal-based approach. In this approach, the premises are diagrammed as goals that address the goals of the argument. For each goal in the diagram, there are a number of ways that the goal can be achieved. The achievement of the defined goal is the result of the argument.

Describe the head, the type of code, etc. (e.g., code) in the area above.

Code Description Code Code			
CONTENT			
Area	Main description of the area	Good description of the area	Strong evidence of description, area, and code
Code Thread	No clear definition of the code	Limited evidence of a code thread	Clear and concise evidence of a thread
Theoretical Base	No theoretical base	Limited evidence of a theoretical base	Strong conceptual base
Strong Evidence: Code	No evidence of the research evidence from the research	Limited evidence of the research evidence from the research	Excellent evidence of the research evidence from the research
Research Data	No research data based evidence	Research data based evidence	Clear and strong research data based evidence
NON-VERBAL SKILLS			
Code	Limited evidence of the code	Strong evidence of the code	Main evidence of the code
